**The Governing Council usually meets twice a month at the Eurotower in Frankfurt am Main, Germany.**

At its first meeting each month, the Governing Council assesses monetary and economic developments and takes its monthly monetary policy decision. At its second meeting, the Council discusses mainly issues related to other tasks and responsibilities of the ECB and the Eurosystem.

The minutes of the meetings are not published, but the monetary policy decision is announced at a press conference held shortly after the first meeting each month. The President, assisted by the Vice-President, chairs the press conference.

**The primary objective of the ECB's monetary policy is to maintain price stability. The ECB aims at inflation rates of below, but close to, 2% over the medium term.**

ECB Introductory Statement [ First paragraph only. You can view the full statement at [www.ecb.int](http://www.ecb.int) ]

**Introductory statement**

**Jean-Claude Trichet, President of the ECB,  
Lucas Papademos, Vice President of the ECB  
Frankfurt am Main, 6 December 2007**

[...]

On the basis of our regular economic and monetary analyses, we decided at today's meeting to leave the key ECB interest rates unchanged. The latest information has confirmed the existence of strong short-term upward pressure on inflation, with the HICP inflation rate reaching 3.0% in November. It has also fully confirmed our assessment that there are upside risks to price stability over the medium term. Against this background, and with money and credit growth remaining very vigorous in the euro area, the Governing Council stands ready to counter upside risks to price stability, as required by its mandate. The economic fundamentals of the euro area remain sound. However, the reappraisal of risk in financial markets is still evolving and is accompanied by continued uncertainty about the potential impact on the real economy. We will therefore monitor very closely all developments. By acting in a firm and timely manner on the basis of our assessment, we will ensure that second-round effects and risks to price stability over the medium term do not materialise. Firmly anchoring medium and long-term inflation expectations in line with price stability is all the more important at times of financial market volatility and increased uncertainty. As regards the financial markets, we will continue to pay great attention to developments over the coming weeks.

#### **News Release**

#### **Bank of England Reduces Bank Rate by 0.25 Percentage Points to 5.5% 6 December 2007**

The Bank of England's Monetary Policy Committee today voted to reduce the official Bank Rate paid on commercial bank reserves by 0.25 percentage points to 5.5%.

Although output in the United Kingdom has expanded at a brisk pace for the past two years, there are now signs that growth has begun to slow. Forward-looking surveys of households and businesses suggest spending is moderating, broadly in line with the projections contained in the November Inflation Report. But conditions in financial markets have deteriorated and a tightening in the supply of credit to households and businesses is in train, posing downside risks to the outlook for both output and inflation further ahead.

CPI inflation was 2.1% in October. Higher energy and food prices are expected to keep inflation above the target in the short term. Although upside risks to inflation remain, which the Committee will continue to monitor carefully, slowing demand growth should ease the pressures on supply capacity, bringing inflation back to target in the medium term.

Against that background, the Committee judged that a decrease in Bank Rate of 0.25 percentage points to 5.5% was necessary to meet the 2% target for CPI inflation in the medium term.

The minutes of the meeting will be published at 9.30am on Wednesday 19 December.

#### **Note to Editors**

The previous change in Bank Rate was an increase of 0.25 percentage points to 5.75% on 5 July 2007.
