0 = Value close to zero.

... = Reported to be nil, not reported, not shown for reasons of confidentiality, not meaningful or not applicable.

Owing to rounding and incomplete reporting of various breakdowns, the component items do not always sum to the total for the category in question.

The term "global" refers only to data for which the BIS has made an adjustment for estimated gaps in reporting. The term "total" is used when referring to all reported transactions for a particular item or aggregate.

"Gross-gross", or simply "gross", refers to data for which no adjustment has been made for estimated double-counting; "net-gross" refers to data for which adjustments have been made for estimated local double-counting; and "net-net", or "net", refers to data adjusted for both local and cross-border double-counting.

**Foreign exchange turnover net of local and cross-border inter-dealer double-counting by instrument, counterparty and currency in April 2004**

Note: This table and the subsequent tables E.2 to E.8 and E.16 include data on outright forwards and foreign exchange swaps which are also included in tables E.20 to E.27.

<sup>1</sup> Because two currencies are involved in each transaction, the sum of transactions in individual currencies comes to twice the total reported turnover. <sup>2</sup> Due to incomplete counterparty breakdown, components do not always add to totals for spot transactions. This also impacts the netting adjustment for the maturity breakdowns.

Note: This table and the subsequent tables E.2 to E.8 and E.16 include data on outright forwards and foreign exchange swaps which are also included in tables E.20 to E.27.

<sup>1</sup> Because two currencies are involved in each transaction, the sum of transactions in individual currencies comes to twice the total reported turnover. <sup>2</sup> Includes only transactions where at least one counterparty is located in the country of issue of the currency in question. <sup>3</sup> Due to incomplete counterparty breakdown, components do not always add to totals for spot transactions. This also impacts the netting adjustment for the maturity breakdowns.

<sup>1</sup> Spot, outright forward and foreign exchange swap transactions. Data may differ slightly from national survey data owing to differences in rounding and aggregation procedures. <sup>2</sup> Because two currencies are involved in each transaction, the sum of transactions in individual currencies comes to twice the total reported turnover. <sup>3</sup> Includes only transactions where at least one counterparty is located in the country of issue of the currency in question. Note: This table and the subsequent tables E.21 to E.27 include data on outright forwards and foreign exchange swaps which are also included in tables E.1 to E.8 and E.16.

<sup>1</sup> While data on total options are shown on a net basis, separate data on options sold and options bought are recorded on a gross basis, ie not adjusted for inter-dealer double-counting. <sup>2</sup> Because two currencies are involved in each transaction, the sum of transactions in individual currencies comes to twice the total reported turnover. <sup>3</sup> Due to incomplete counterparty breakdown, components do not always add to totals for currency swaps transactions. This also impacts the netting adjustment for the maturity breakdowns.

<sup>1</sup> While data on total options are shown on a net basis, separate data on options sold and options bought are recorded on a gross basis, ie not adjusted for inter-dealer double-counting. <sup>2</sup> Because two currencies are involved in each transaction, the sum of transactions in individual currencies comes to twice the total reported turnover.

<sup>1</sup> While data on total options are shown on a net basis, separate data on options sold and options bought are recorded on a gross basis, ie not adjusted for inter-dealer double-counting. <sup>2</sup> Due to incomplete counterparty breakdown, components do not always add to totals for currency swaps transactions. This also impacts the netting adjustment for the maturity breakdowns. Table E.21 (cont.)

<sup>1</sup> While data on total options are shown on a net basis, separate data on options sold and options bought are recorded on a gross basis, ie not adjusted for inter-dealer double-counting. <sup>2</sup> Due to incomplete counterparty breakdown, components do not always add to totals for currency swaps transactions. This also impacts the netting adjustment for the maturity breakdowns. Table E.22 (cont.)

<sup>1</sup> Outright forwards, foreign exchange swaps, currency swaps, options and other products. Data may differ slightly from national survey data owing to differences in rounding and aggregation procedures. <sup>2</sup> Because two currencies are involved in each transaction, the sum of transactions in individual currencies comes to twice the total reported turnover. <sup>3</sup> Includes only transactions where at least one counterparty is located in the country of issue of the currency in question.
