FAIR YIELD RELATIVE VALUE HELP FOR RVF

RVF graphs the spread between a selected bond's yield and its Bloomberg Fair Value yield. Bloomberg Fair Value is a theoretical pricing model based on OAS methodology, which indicates where a bond should trade based on where similar bonds currently trade. You can use RVF to compare a bond's yield to the Bloomberg Fair Value yield to see if the bond is currently trading cheap (wide) or rich (narrow).

[1 <Go> for Instructions]

HELP FOR **SWAP RELATIVE VALUE**

Search **RVS** <HELP> for:

Page 1 / 6

RVS graphs the spread of a selected bond's historical yield against an implied interest rate swap curve. You can use RVS to compare the current spread to the historical spread to see if the bond is currently trading cheap (wide) or rich (narrow).

INSTRUCTIONS

Enter {ticker symbol w/coupon and maturity} <yellow key> {mnemonic} <Go>. For example, enter KPN 4.75 11/08 <CORP> RVS <Go>. You can choose any of the following relative value functions:

- RV <Go> - RELATIVE VALUE
- RVM <Go> - MATURITY RELATIVE VALUE
- RVD <Go> - DURATION RELATIVE VALUE
- RVF <Go> - FAIR YIELD RELATIVE VALUE
- RVFP <Go> - FAIR PRICE RELATIVE VALUE
- RVS <Go> - SWAP RELATIVE VALUE
- RVCW <Go> - WORST RELATIVE VALUE
- RVYC <Go> - IYC RELATIVE VALUE

<HELP> to contact our 24/7 Help Desk, <MENU> to return.

Govt RVF

HELP FOR **SWAP RELATIVE VALUE**

Search **RVS** <HELP> for:

Page 2 / 6

You can use COVR <Go> (Bond Calculation Override) to modify the parameters defining the price/yield relationship of certain bonds.

SHORTCUTS

Once you select a fixed income security, enter RV/RVD/RVF/RVFP/RVS/RVM/RVCW (period code) <Go> to specify the data frequency. Period codes include (D) daily, (W) weekly, and (M) monthly.

DESCRIPTION OF DISPLAY

Market information for the selected security appears on the top line. For more information, enter Q <HELP>. The following fields also appear:

Range: The date range for the analysis. To change your default, enter TDEF <Go>. NOTE: The RV functions can only display six months of data at a time. If your DATE RANGE default is set to 12 months in TDEF <Go>, the date range displays the first six months of data. For RV to default to the current data, you must enter six or less in TDEF <Go>.

<HELP> to contact our 24/7 Help Desk, <MENU> to return.

Govt RVF

HELP FOR **SWAP RELATIVE VALUE**

Search **RVS** <HELP> for:

Page 3 / 6

Period: The frequency of the data that appears on the graphs. For a list of choices, move your cursor to the highlighted field.

Sec: The compounding frequency of the security. For a list of choices, move your cursor to the highlighted field.

Crv: The compounding frequency of the yield curve. For a list of choices, move your cursor to the highlighted field.

1=Mat, 2=Dur,
3=F.V., 4=Swap,
5=Worst, 6=IYC #:

The implied yield curve type. NOTE: If you choose IYC, you must enter a yield curve number. For a complete list of curve numbers, enter IYC1 <GO>. The name of the benchmark or IYC curve appears to the right of this field. If you use RV flag 1 through 5, the value is saved and used as the default the next time you use RV. For example, if you set the RV flag to 1 (RV to Maturity), the next time you use RV, it calculates to maturity by default. If you choose RV flag #6, RV versus a specific IYC curve, the setting is not saved.

<HELP> to contact our 24/7 Help Desk, <MENU> to return.

HELP FOR **SWAP RELATIVE VALUE**
Search **RVS** <HELP> for: XXXXXXXXXXXXXXXXXXXX Page 4 / 6

Maturity/NextCall/
Put/Worst/Custom: The type of date for the swap to workout, the workout date, and price. For a list of choices, move your cursor to the highlighted field. If you choose C-Custom, enter a date and price.

Sec: The price used to calculate the security's yield. For a list of choices, move your cursor to the highlighted field.

B=BGN Pricing **BGN = BLOOMBERG**
F=Default PCS: Appears if you have price defaults in PCS <Go>. The pricing source. For a list of choices, move your cursor to the highlighted field.

Crv: The price used to calculate the implied yield curves. For a list of choices, move your cursor to the highlighted field.

Last: The spread on the last date in the date range.
Hi: The highest spread in the date range.
Ave: The average spread over the date range.
Low: The lowest spread in the date range.

Off Ave (Pts): The difference between the lowest and the average.

<HELP> to contact our 24/7 Help Desk, <MENU> to return.

Govt RVF

HELP FOR SWAP RELATIVE VALUE		Page 5 / 6
Search RVS <HELP> for:		
Off Ave (SD):	The points off the average divided by the standard deviation of the data points from the average.	
Value of .01:	The price value of a basis point change in yield.	
P&L to Ave:	The profit or loss generated if the selected issue's yield moves back to give the historical average spread. NOTE: If a number has too many digits to fit on the screen, "-lge" appears.	
<u>The top graph displays the historical and implied yield on the vertical y-axis and the date on the horizontal x-axis. The implied yield is derived by interpolating the yield of the issues, using the selected yield curve that has maturities immediately before and after the selected issues.</u>		
NOTE: The Treasury yield curve is defined by the on-the-run Treasury securities. If you select a current Treasury or a relative value function, the historical yield is zero.		

<HELP> to contact our 24/7 Help Desk, <MENU> to return.

Govt RVF

HELP FOR **SWAP RELATIVE VALUE**

Search **RVS** <HELP> for:

Page 6 / 6

The bottom graph displays the spread between the yields on the vertical y-axis and the date on the horizontal x-axis. A legend appears in an unused portion of each graph.

Page 2 and subsequent pages display the data points used to construct the graphs. The following information appears:

Date: The date of the analysis.

Bid/Ask/Mid Price: The price for that date, based on your selection in the Sec pricing field on page 1 of the selected relative value function.

Yield: The yield for that date.

IMP YLD: The implied yield for that date.

Sprd: The spread between Yield and IMP YLD.

HELP FOR **SPREAD MATRIX MENU-SET-UP TABLES**
Search FT <HELP> for: [REDACTED] Page 4 / 7

Price YT Mty,
or YT Wrst:

You can choose to display the security relationships as (P) price, (M) yield-to-maturity, or (W) yield-to-worst. The following restrictions apply:

- Treasury curve and strip/duration curve spreads can only be given in yield-to-maturity form.
- Futures/T-bond basis spreads are given only in price spread form.
- Generic T-bonds and T-bills can only be quoted in yield form.
- Futures can only be quoted in price form.

Spread, Ratio,
or Basis:

Choose to display (S) spread, (R) ratio, or (B) basis difference between the security and benchmark. The exceptions mentioned above are yield curve relationships (spreads only) and futures/T-bond spreads where the T-bonds are deliverable into the futures contract, then given as basis spreads.
