

Track Your P&L

Track Your P&L (TYPL) tracks the P&L of a trader for up to 45 different economic releases and Trading Day of the Month (TDOM).

You may view economic release & TDOM data on a

- monthly level
- yearly level
- career level

TYPL also tracks

- win / loss days
- win / loss ratio

There are over 200,000 calculations contained inside the spreadsheet that achieves the end results, for the trader.

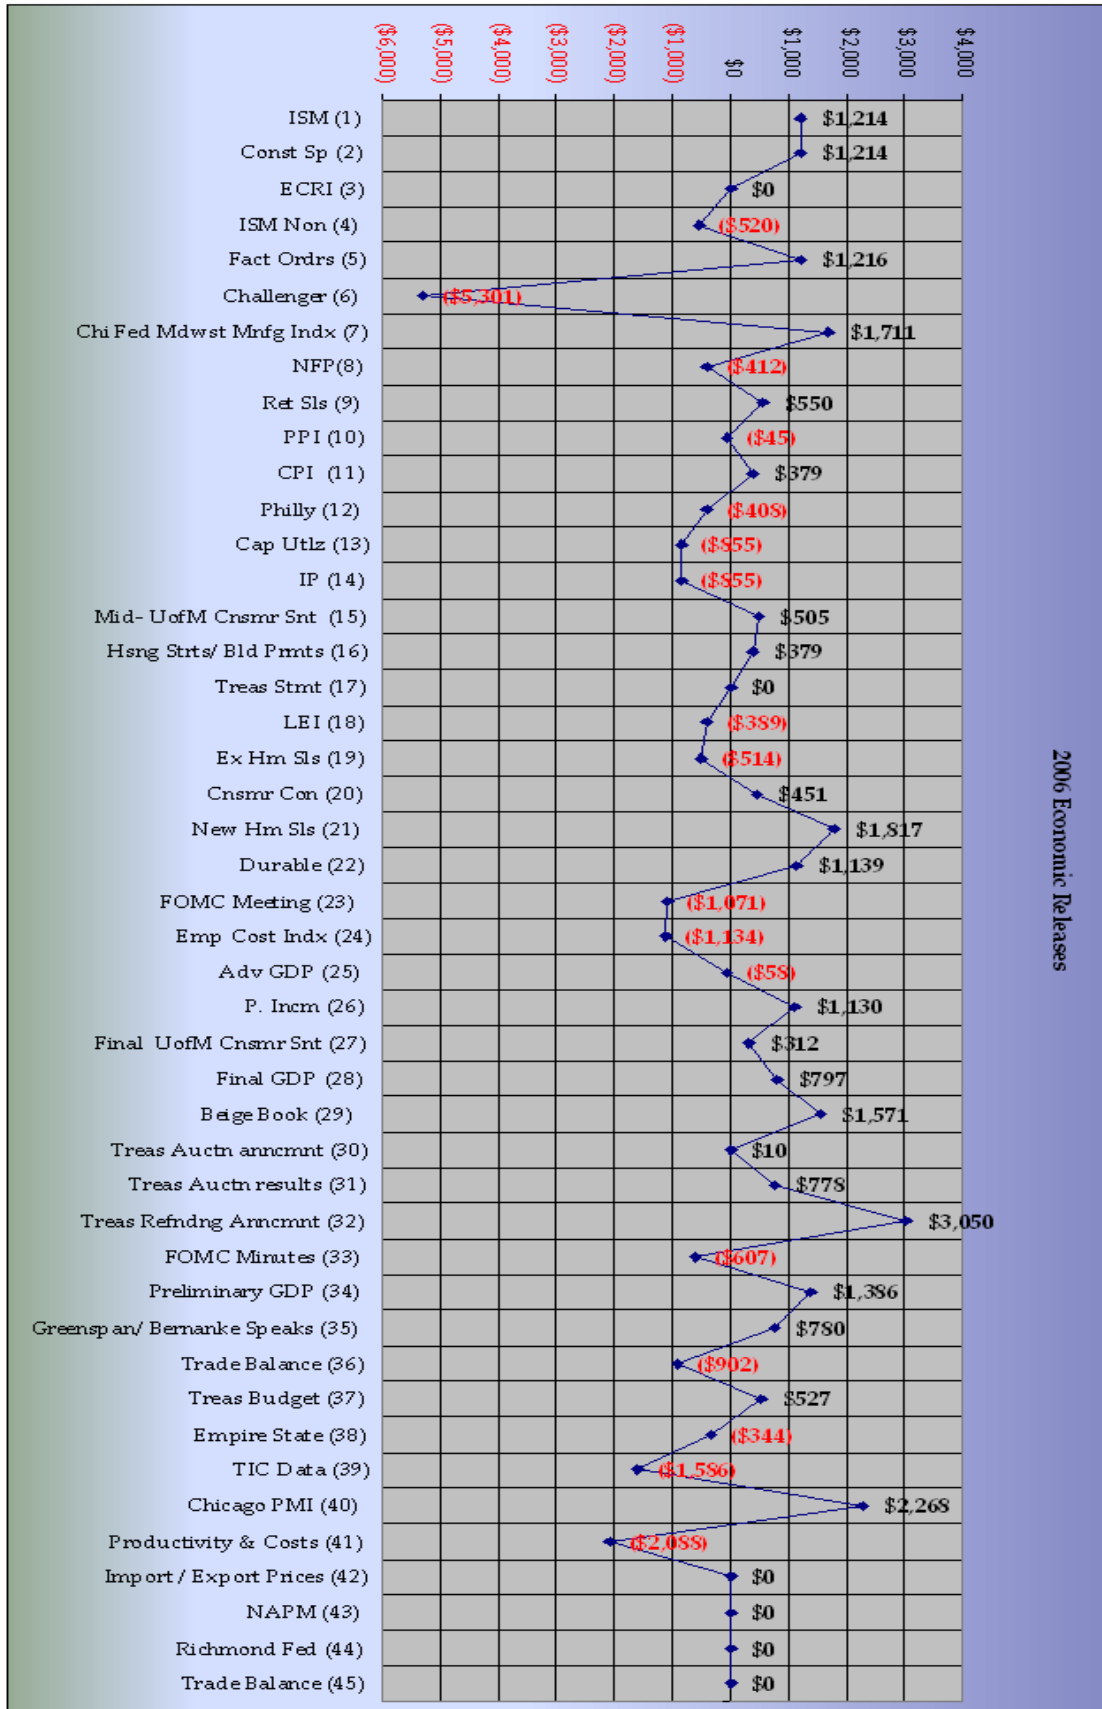

TYPL tracks trades from August 2004 forward. This date was picked because we believe the markets changed significantly enough that analyzing data before that time may prove futile.

You may receive the spreadsheet by emailing me (jgoulding@ghco.com) and asking for it, then, I'll forward it to you. You'll find a complete explanation inside the spreadsheet.

The few pages show examples of the TYPL spreadsheet.

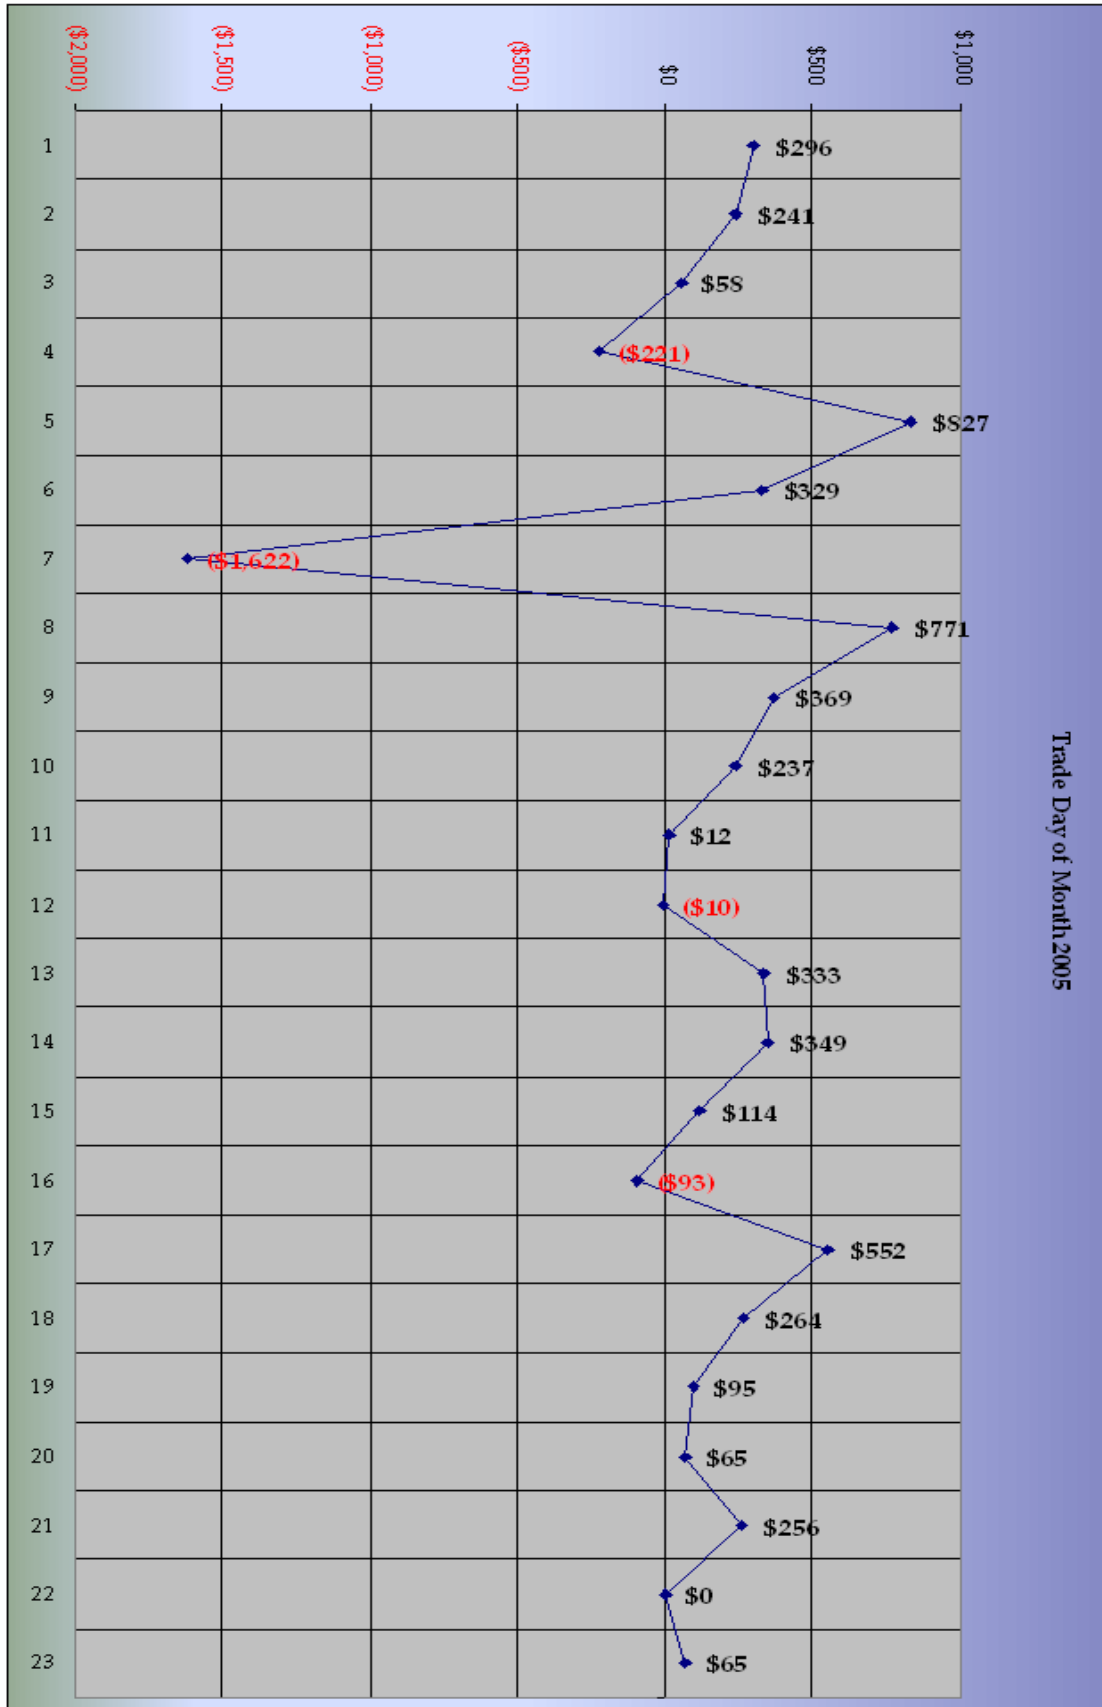

The first graph shows an example of how a trader has traded on certain economic releases. The graph represents an average of all the economic numbers the trader traded.

If the trader did not trade on the day of the economic release, due to illness or vacation etc., the spreadsheet will not include that day in its calculations.

The next graph, on the following page, shows how a trader trades on a particular ‘Trading Day of the Month (TDOM).

The graph represents an average of all the Trading Days of the Month the trader traded. If the trader did not trade on the day of the economic release, due to illness or vacation etc., the spreadsheet will not include that day in its calculations.

The statistics, in the spreadsheet, are also in table form for the economic releases.
 By having the data in table form the trader can:

- manipulate the data any way he/she would like
- have an overview of his/her
 - monthly trading
 - yearly trading
 - career trading

Monthly W/L Ratio

Win Loss Ratios by Month (2006)				
	Winners	Losers	NDT	Ratio
January	10	8	18	55.56%
